Dear Hiring Manager,

       I will graduate the coming May with a degree in computer science. I have a solid comprehension of data structures, CS fundamentals and experience programming in Java, C++ and Python. As well as internship experience and a hackathon win. I am always eager to acquire new technologies and explore new environments to broaden my frame of reference and enlighten myself. This is shown by my dedication to attending hackathons and technical courses outside my classes like the one year cuny tech program I am currently pursuing where I am acquiring an understanding of Python, data analysis and machine learning.

       I am excited of the opportunity to work at Aurora because it offers the opportunity to contribute to redefining transportation. This aligns with my passion for solving challenges through technology. I can interview in Fridays and weekends, anytime.

Thank you,
Maryam Kurbanova
